## MHIM 841/MATH 800: STATISTICS IN HOSPITALITY AND TOURISM BIOMETRY

STREAMS: MSC (WIEM, MHIM)
TIME: 3 HOURS

## DAY/DATE: TUESDAY 06/04/2021

2.30 P.M. - 5.30 P.M.

## INSTRUCTIONS:

- Answer question ONE and any other TWO
- Do not write anything on the question paper

1. In the following questions
(a) Discuss importance of central limit theorem in statistics
(b) Differentiate a probability distribution from a frequency distribution [4 marks]
(c) You are presented with a data of the height of 150 trees from woodlot A and a
height of a similar number in woodlot $B$. you want to determine whether there is
a difference in mean height between the two woodlots
(i) Discuss factors you would consider before settling on the appropriate test statistic
[10 marks]
(ii) With explanation, identify the best test for the hypothesis [3 marks]
2. (a) The weight of fish harvested from three ponds under different management systems is recorded below

| Pond 1 | 8 | 6 | 7 | 5 | 7 | 5 | 8 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Pond 2 | 2 | 3 | 5 | 4 | 3 | 6 | 5 | 3 | 2 |
| Pond 3 | 2 | 1 | 3 | 4 | 2 | 3 | 5 | 1 |  |

Using Kruskal-Wallis test, determine whether there are differences between the ponds
[12 marks]
(b) Discuss the requirements for performing Kruskal Wallis test
3. (a) The monthly amount of rain recorded over eight months for two different regions ( A and B ) as shown below

| A (mm) | 15 | 20 | 18 | 8 | 10 | 5 | 12 | 16 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| B (mm) | 18 | 22 | 20 | 6 | 8 | 6 | 16 | 16 |

By use of a t -test determine whether there is a significant difference between the amount received in the two regions [12 marks]
(b) The fish captured in a lake were categorized by their weight as shown below

| Weight (kg) (x) | $1-5$ | $6-10$ | $11-15$ | $16-20$ | $21-25$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Number of fish (f) | 25 | 40 | 45 | 35 | 10 |

## Calculate

(i) The specific media weight [4 marks]
(ii) The standard deviation of the distribution
4. (a) The concentration of phosphates $(\mathrm{mg} / \mathrm{kg})$ in a stream is taken in two seasons, as shown below

| Dry season | 18 | 20 | 22 | 15 | 16 | 13 | 15 | 18 | 16 | 21 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Wet season | 10 | 8 | 11 | 9 | 7 | 10 | 12 | 11 |  |  |

Using the man-Whitney $U$ test, determine whether the concentration between the two areas was different [10 marks]
(b) In a certain research, community members in two villages neighboring a national park were asked to rate the benefits they got from the community social responsibility projects by park management. The responses are as given in the below

|  | Village |
| :--- | :--- |

MHIM 841/MATH 800

| Rating | Lake view | Manyani |
| :--- | :--- | :--- |
| Very high | 10 | 4 |
| High | 12 | 4 |
| Moderate | 15 | 13 |
| Low | 8 | 8 |
| Very low | 3 | 8 |

By use of a $x^{2}$ test, test the association between the rating and project [10 marks]

Note:
$H=\frac{12 S S_{B}}{N_{T}\left(N_{T}+1\right)}, S S_{B}=\frac{T_{1}^{2}}{N_{1}}+\frac{T_{2}^{2}}{N_{2}}+\ldots+\frac{T_{K}^{2}}{N_{K}}-\frac{N_{T}\left(N_{T}+1\right)^{2}}{4}, S p=\sqrt{\frac{S_{1}^{2}+S_{2}^{2}}{2}}, x^{2}=\sum \frac{(0-E)^{2}}{E}, U=N_{1} N_{2}+\frac{N_{1}\left(N_{1}+1\right)}{2}-R_{1}$,
