## CHUKA

UNIVERSITY

UNIVERSITY EXAMINATION

## RESIT/SUPPLEMENTARY / SPECIAL EXAMINATIONS EXAMINATION FOR THE AWARD OF DEGREE OF BACHELOR OF

## MATH 443: DESIGNS AND ANALYSIS OF EXPERIMENTS

STREAMS:

DAY/DATE: TUESDAY 10/08/2021
TIME: 2 HOURS

INSTRUCTIONS:

- Answer question one and any other two questions

## Question One (30 marks)

a) (i) Briefly explain the three basic principles used in experimental designs.
(ii) Which of these principles is not applicable in a completely randomized design?

Explain.
b) The table below shows the lifetime in hours of samples of 3 different types of television tubes manufactured by a company.

|  | Replications |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Sample 1 | 407 | 411 | 409 |  |  |
|  | Sample 2 | 404 | 406 | 408 | 405 |
| Sample 3 | 402 |  |  |  |  |
|  | 410 | 408 | 406 | 408 |  |

Analyse the data at 5\% level of significance to determine whether there is a difference between 3 types. (6 marks)
c) An experimenter wishes to compare 5 treatments, and has resources to take a total of 25 observations, 5 for each treatment. How many residuals (error) degrees of freedom are there if she uses
(i) A completely randomised design
(ii) A randomised block design.
(2 marks)
(iii) A Latin square design
(iv) Give a reason for not using the design with the least number of residual degrees of freedom.
d) (i) Define a latin square of size $(5 \times 5)$
(ii) When are two Latin squares said to be orthogonal?

## Question Two (20 marks)

i) A study was conducted to determine the effects of sleep deprivation on hand-steadiness. The four levels of sleep deprivation of interest are $12,18,24$, and 30 hours. 32 subjects were randomly selected and assigned to the four levels of sleep deprivation such that 8 subjects were randomly assigned to each level. The response is the reaction time to the onset of a light cue. The results (in hundredths of a second) are contained in the following table:

## Treatment (in hours)

| 12 | 18 | 24 | 30 |
| :--- | :--- | :--- | :--- |
| 20 | 21 | 25 | 26 |
| 20 | 20 | 23 | 27 |
| 17 | 21 | 22 | 24 |
| 19 | 22 | 23 | 27 |
| 20 | 20 | 21 | 25 |
| 19 | 20 | 22 | 28 |
| 21 | 23 | 22 | 26 |
| 19 | 19 | 23 | 27 |

a) Write the model appropriate for this analysis clearly explaining each symbol used.
b) Perform the analysis of variance at $5 \%$ level of significance.
(15 marks)
ii) Give the model for a split plot design explaining clearly the meaning of each symbol used

## Question Four (20 marks)

a) The following table gives fields of wheat per plot in a manurial experiment. The 4 manurial treatments denoted by $\mathrm{A}, \mathrm{B}, \mathrm{C}$ \& D

|  |  | Column |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Row | 1 | 2 | 3 | 4 |
| 1 | B42 | C44 | D54 | A34 |
| 2 | D38 | A51 | B49 | C41 |
| 3 | C51 | D51 | A54 | B60 |
| 4 | A45 | B57 | C50 | D35 |

(i) Prepare an ANOVA table for the data.
(ii) Test whether effects of treatment differ significantly from one another at 5\% level of significance.
b) The following data represents a split plot with varieties as whole plot treatments in a randomized complete block design. Row spacing was applied to subplots. The yield in bags per acre for 4 blocks is given in the table below.

|  | Blocks |  |  |  |  |
| :---: | :--- | :--- | :--- | :--- | :--- |
| Row spacing | Variety | 1 | 2 | 3 | 4 |
| $18^{\prime \prime}$ | A | 33.6 | 37.1 | 34.6 | 35.4 |
|  | B | 28.0 | 25.5 | 29.4 | 27.3 |
|  | A | 31.1 | 34.5 | 32.7 | 30.7 |
|  | B | 23.7 | 26.2 | 25.8 | 26.8 |
| $30^{\prime \prime}$ | A | 33.0 | 29.5 | 30.7 | 30.7 |
|  | B | 23.5 | 26.8 | 23.3 | 21.4 |
| $36^{\prime \prime}$ | A | 28.4 | 29.9 | 32.3 | 28.1 |
|  | B | 25.0 | 25.3 | 26.4 | 24.6 |

Perform the main plot analysis
(10 marks)

## Question Five

a) Briefly explain the following terms used in factorial designs.
(i) Simple effect
(ii) Main effect.
(iii) Interaction effect between factors.
b) The following are results of a $2^{3}$ factorial experiment run in a randomised complete block design.

|  | Blocks |  |  |
| :---: | :---: | :---: | :---: |
| Treatment | 1 | 2 | Total |
| 1 | 2 | 3 | 5 |
| a | 6 | 14 | 20 |
| b | 10 | 15 | 25 |
| ab | 6 | 9 | 15 |
| c | 4 | 6 | 10 |
| ac | 15 | 25 | 40 |
| bc | 18 | 22 | 40 |
| abc | 8 | 12 | 20 |
| Total | 69 | 106 | 175 |

(i) Obtain the design matrix $x$ of this design
(ii) Obtain the estimates of factorial effects.
(iii) Give a complete analysis of the experiment and check which factorial effects are significant at 5\% level of significance.
